Funding country: Netherlands
Project starting year: 2006
Project ending year: 2010
Area(s) of research: Prevalence, incidence and patterns of drug use, Determinants of drug use

Objectives:
Our first main aim is to study influences of genes and environment on variation in adolescent psychopathology and wellness. Our second aim is to identify nonshared environmental influences on adolescent psychopathology and wellness. Our third aim is to study gene-environment interaction for family functioning and adolescent psychopathology and wellness.

Scientific discipline(s) involved: Psychology, Other discipline, Toxicology, Statistics or epidemiology

Initial identified needs:
Identification of pathways into and out of psychopathology will help the development of prevention and intervention strategies.

Performed by: Department of Biological Psychology, VU University
